

DOMAIN NAME: E-COMMERCE
PROJECT: BIG BASKET

ALL MODULES:

- M.Yashwanth Reddy - Fashion Module
 - P.Saikiran - Tea & Ghee Module
 - P.Lavanya - Electronics Module
 - S.Sahithi - Search & Order Module
 - K.Sanjay Reddy - Beauty & Hygiene Module
 - N.Jithin Varma - Pharmacy & Wellness Module
- 

Fashion Module:

- **In the BigBasket Fashion Module, I developed and automated an End-to-End testing framework using Selenium with BDD (Behave), Selenium with Pytest and Page Object Model (POM)**
- **The testing scenarios conducted include:**
- User login using mobile number and OTP verification
- Navigation to the Fashion category
- Selection of Men's fashion products
- Applying brand filters such as Puma
- Adding multiple products to the cart
- Cart validation and verification
- Proceeding to checkout functionality testing
- Invalid mobile number validation
- Invalid OTP validation
- Invalid card details validation
- Screenshot capturing, logging, and Allure report generation

Tea & Ghee Module:

- **In the BigBasket Tea & Ghee Module, I developed and automated an End-to-End testing framework using Selenium with BDD (Behave), Selenium with Pytest, and Page Object Model (POM).**
- **The testing scenarios conducted include:**
- User login using mobile number and OTP verification
- Navigation to the Tea and Ghee categories
- Tea product search and brand filter validation
- Ghee product search and brand filter validation
- Applying brand filters such as Chai Point and Amul
- Adding Tea and Ghee products to the cart
- Cart validation and verification
- Proceeding to checkout functionality testing
- Invalid mobile number validation
- Invalid OTP validation
- Invalid card details validation
- Screenshot capturing, logging, and Allure report generation

Electronics Module:

- In the BigBasket Electronics Module, I developed and automated an End-to-End testing framework using Selenium with BDD (Behave), Selenium with Pytest, and the Page Object Model (POM) framework
- **AUTOMATION COVERAGE:**
 - User Login & OTP Validation
 - Navigation to the Electronics category
 - Selection of Audio Devices and Earbuds products
 - Applying brand filters such as Boat
 - Add-To-Cart & Cart Validation
 - Quantity Increment
 - Product Details Verification
 - Checkout Functionality Validation
 - Invalid Mobile & Invalid OTP Testing
- **FRAMEWORK FEATURES:**
 - End-To-End, Positive & Negative Testing
 - Assertions Validation
 - Screenshot Capturing
 - Logging Mechanism
 - Data-Driven Testing using CSV
 - Allure Reports Integration

Search & Order Module

- For the BigBasket Search & Order Module, I designed and developed two automation testing frameworks using Selenium with PyTest and BDD (Behave) with Selenium, following the Page Object Model (POM) approach. The frameworks were enhanced with CSV-based Data-Driven Testing, Allure Reporting, Logging, and Screenshot Capture for efficient test execution and debugging.
- **The automated test scenarios include:**
 - User login with mobile number and OTP verification
 - Product search and validation
 - Positive and negative product search testing
 - Adding products to the basket
 - Basket verification and quantity update validation
 - Checkout process and order workflow testing
 - End-to-End Search & Order functionality automation
 - Automated report generation with screenshots and logs

Beauty & Hygiene Module:

- Developed a professional automation testing framework for the BigBasket Beauty & Hygiene module using Selenium WebDriver with Python by implementing both PyTest and Behave BDD frameworks following Page Object Model (POM) architecture.

➤ AUTOMATION SCENARIOS COVERED:

- Login & OTP Authentication Validation
- Beauty & Hygiene Product Navigation
- Dove Brand Filter Validation
- Add-To-Basket & Basket Verification
- Product Quantity Increment Validation
- Checkout Workflow Validation
- Invalid Mobile Number Validation
- Invalid OTP Validation

➤ FRAMEWORK FEATURES

- End-To-End, Positive & Negative Testing
- Assertions for Validation Accuracy
- Screenshot Capturing & Failure Handling
- Logging Mechanism for Execution Tracking
- Data-Driven Testing using CSV Files
- Allure Reports with Screenshots & Logs
- Reusable Utility Functions & POM Structure
- Automatic Report Generation & Browser Opening

Pharmacy & Wellness Module

- Automated the BigBasket Pharmacy & Wellness module using Selenium WebDriver with Python using PyTest, Behave BDD, and Page Object Model (POM) architecture.

➤ AUTOMATION COVERAGE

- Login & OTP Validation
- Pharmacy Module Navigation
- Brand & Price Filter Validation
- Add-To-Basket & Checkout Validation
- Invalid Mobile & Invalid OTP Testing

➤ FRAMEWORK FEATURES

- End-To-End, Positive & Negative Testing
- Assertions, Screenshots & Logging
- Data-Driven Testing using CSV
- Allure Reports Integration
- Reusable Framework Structure

Deliverables:

- Project Deliverables
- Automated test scripts using Selenium WebDriver with Pytest and Behave
- BDD feature files and step definitions
- Page Object Model (POM) framework
- Data-driven testing using CSV files
- Positive and negative test scenarios
- Screenshots and execution logs
- Allure Report test execution reports
- Project documentation and framework architecture
- Source code uploaded to [GitHub]

Thank You!
